

2nd Sprint Review

Dat O

What I wanted to accomplish

- To familiarize myself with other forms/uses of genetic algorithms
- To get a general idea of what kind of project I wanted to create/showcase
- Find additional sources that will help along the way

Accomplished so far

- Able to find some different projects incorporating the use of the algorithms
- Had a better understanding of how these algorithms allow for a mutation
- Started to utilize Open processing to create a simple visual program to help see the algorithm at work

On-going Methods

- A literature review giving all sources and programs that will help me present for the final project
- Learning how to code in JavaScript to utilize OpenProcessing
- Testing various types of programs to see how the computer corrects itself as it mutates
