

# 1<sup>st</sup> Sprint Review

By Hakeem Yatim

# What did we want to achieve in the last sprint?

- We needed to make a team for our project and come up with a general idea of what we wanted to do the project on.

# What did we achieve in the last sprint?

- I have not made a team yet, but I do know some topics that interest me in terms of working on this project.
- I also know that there are some of my peers that are interested in a similar field of AI Research, so there is a potential of me working with those peers

# What are we especially proud of in the last sprint?

- I'm proud of the research I've done with the topic I have selected (Which is AI in sports)
- I'm also proud of wanting to dig deeper within the topic and finding a passion on it

# What did we not achieve in the last sprint?

- Like said before, I do not have a team yet and I will need to ask around to see who would want to team up with me.

# What are we going to do different in the next sprint?

- Get a team together
- Narrow down the topic (be more specific about it, like are we trying to develop an app for something specific within the realms of AI in sports or?)
- Gather more research and validate the credibility
- Have an Idea of what the final product looks like

# What are our questions to the other teams?

- What topics are they researching/developing their project on and how did they specify it?
- How did they do their research?
- What are their goals and time schedule for different phases of the project?

# What do I want to find out? Who will benefit from this?

- For my project, I want to look at AI in sports, specifically how AI assist the development of athletes more efficiently.
- I think that with my project, other peers and Dr. B may benefit from it because the application of AI in sports may also be applied in other industries too.
- The key intention of this project is to inform people about AI in sports because it can be interesting to learn something new.
